

CHEYENNE

Large, multi-flush/shower, fully accessible.

**Shown with standard barnwood wall texture and cedar shake roof texture.*

The Cheyenne is a large multi-flush, multi-shower facility. The Cheyenne has a multi-user restroom facility on the front and 4 individual shower rooms on the back. The Cheyenne is designed to meet

all current American with Disabilities Act requirements. The Cheyenne is ideal for any area that experiences extreme vandalism. The Cheyenne can be ordered in several different textures and a multitude of different and unique earthtone colors.

Durability:

The Cheyenne is engineered and designed for long-life in extreme conditions. The building meets or exceeds the effects of a Zone 4 earthquake, a 100-mph wind load and a 120 pounds per square foot snow load.

Maintenance:

The Cheyenne is extremely easy to maintain. With our steel reinforced 5,000 psi concrete construction, the building will not rot, rust, or burn. The building interior is primed and painted with white paint to reflect natural light from the Lexan windows mounted in heavy steel frames cast into the walls.

Cleaning of the building interior is easily accomplished with a brush and warm soapy water. Stall partitions are made of the same high strength concrete as our exterior walls and roof and also coated with anti-graffiti sealer.

The walls and roof structure are made of “colored through concrete”, coated with an exterior stain, followed by an anti-graffiti sealer.

Meets UFAS, A.D.A. and Title 24 statute of the State of California

Vandal resistant building & toilet components

4" thick steel reinforced concrete walls

5" thick steel reinforced concrete roof & floors

Quick installation and hookup at the jobsite

Available in (25) different and unique earthtone colors

Barnwood, stucco, exposed aggregate, or split face block exterior wall textures

Cedar shake, ribbed metal, or exposed aggregate exterior roof textures

Available in custom textures

Utilities:

The Cheyenne's utilities are pre-wired, plumbed and tested before shipping to meet local code requirements. They are conveniently concealed within the chase/storage area for easy hookup and maintenance and to reduce the effects of vandalism.

Standard fixtures include vitreous china in the restroom and vandal resistant stainless steel modular shower control units in the shower rooms. Twin high volume hot water tanks are standard. Optional stainless steel fixtures are available in the restroom and room heaters are available in the showers and restroom.

Hook Up and Installation:

The Cheyenne requires minimal site work. It is designed to sit on a three-

quarter minus gravel base, compacted to a ninety-five percent compaction level. The water, sewage and electrical utility lines are stubbed up through the prepared base material to match up with the utility access hole within the floor of the chase area.

The three sections of the Cheyenne are post-tensioned at site. The

wiring and plumbing of the pre-wired and pre-plumbed sections are connected together. The Cheyenne is then connected to the site utilities. All of this takes place in a matter of 2-3 days. Site construction and supervision time is greatly reduced from a site built building.

Quality and Value:

Because of our two state-of-the-art, 120,000 square foot production facilities, CXT can produce consistently higher quality buildings at a lower cost to meet the needs of city, county, state and federal agencies.

We at CXT take pride in our craftsmanship and are ready to provide you with our legendary customer service. See why we say, "Once you buy a CXT produced building you will never purchase anything else."

Wall Textures:

Standard:

Barnwood

Available Options:

Stucco

Exposed Aggregate

Split Face Block

Roof Textures:

Standard:

Cedar Shake

Available Options:

Ribbed Metal

Exposed Aggregate

Also available custom colors and textures.
